

Agilo is a professional computer split-screen electronic magnifier system consisting of the revolutionary i-Qon, and a camera mounted on an adjustable arm. Agilo works with your computer's existing monitor (TFT or CRT), and simply connects between your computer and its monitor using no software or drivers. This allows control of which image is displayed on the computer's screen, either full screen PC; full screen camera; or both simultaneously (split-screen).

### Features

Ergonomic keypad - can be placed exactly where required.

Hardware only solution - no drivers or software required.

Variable horizontal or vertical split-screening between the computer video and the camera.

Full colour & high contrast reading modes with semi-colours.

Line and line marker modes, freeze image function and user customisable preferences for complete functionality.
