

# QUICKLOOK FOCUS

Your difficulties with seeing can become a thing of the past with the new Quicklook Focus. It is incredibly simple and intuitive to use: rotate the camera to power-on the device, point it at what you want to read, click the focus button and the object appears on the screen, bright, magnified and in pin-sharp clarity thanks to its unique electronic autofocus lens.

The Quicklook Focus is far superior to magnifying lenses with its clear bright image. It generally allows you to use a lower magnification setting so you get more information on the screen. It is light and conveniently sized to let you read wherever you go.

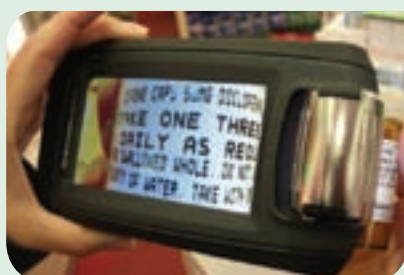

iF Design Award

## Features:

The electronic lens will automatically adjust to give sharp focus on objects from arm's length to up close enabling you to accomplish such everyday tasks as reading menus, checking medications, viewing at photos of loved ones, hobby-work, etc.

The magnification can be varied from 3X to a massive 18X, so the Quicklook Focus will remain useful should your eyesight deteriorate.

The patented flip-out camera enables you see as you write. Great for signing forms, completing crosswords or sudoku puzzles. The lights can be turned off to let you read mobile phone displays, etc.

The freeze function can capture images for closer examination. You might use this function, for instance, to capture a phone number and bring the Quicklook to the phone to dial it.

The Quicklook is pocket-sized at 17cm by 9.5cm and a mere 2.8cm thick weighing only 240 grams. It is remarkably discrete in use – it looks like a personal digital assistant (PDA), so you will not feel conspicuous using it.

## Specifications

**Dimensions:** 171 x 95 x 28mm (6.7 x 3.7 x 1.1 inches)
